

## C# Lesson 3

1. Create a project and name it lesson 4
2. Create a form that looks like this:

Add:

- 5 radio buttons <- New Control
- 1 label
- 1 group box
- 1 Button

3. Add the following code to the form1\_load event function:

```
label1.Visible = false;
```

4. Add the following code to the button1\_click event function:

```
if (radioButton1.Checked || radioButton2.Checked) {  
    label1.Text = "Soda Drinker";  
}  
  
else if (radioButton3.Checked || radioButton4.Checked) {  
    label1.Text = "Healthy choice";  
}  
  
else if (radioButton5.Checked) {  
    label1.Text = "dehydrated";  
}  
  
else {  
    MessageBox.Show("You didn't make a selection", "Dummy");  
}
```

**Fix it!**

1. Why is this this not working? Correct the issue
2. How are radio buttons different than check boxes?

3. How is “||” different from “&&”?
